Translate technical expertise into a useful invitation

THE BRIEF

Promote the availability of a privacy-enhancing technologies learning programme to a relevant professional audience.

MY WORK

Reviewed partner channels, recommended LinkedIn and prepared two editorial approaches. Refined the selected partner-focused approach with the COO.

Programme visual included in my review document. My contribution: audience, channel recommendation and announcement copy.

Two routes into the same technical subject

ROUTE 1 / THOUGHT LEADERSHIP

Innovation only creates impact when it is built on trust.

As healthcare embraces AI, blockchain and data collaboration, protecting sensitive health data has become just as important as unlocking its value.

ROUTE 2 / PARTNER ANNOUNCEMENT

At ImpactScope, we believe responsible innovation depends on technologies that enable both trust and progress.

That's why we're proud to have contributed, through the Crypto Valley Association's Sustainability Working Group, to the Health Data Privacy programme, developed in collaboration with EIT Health.

Editorial alternatives for approval. The partner-focused route was selected for refinement.

Match audience, channel and next action

01

Audience

Professionals in healthcare, technology and policy

>

02

Channel

Partner activity supported LinkedIn for the announcement

>

03

Message

Explain technical value through the programme and collaboration

>

04

Action

Learn more and register for the programme

WHY THE DECISION MATTERED

The job was to make specialist technology understandable and relevant, then give the reader a clear next step. This case shows the actual copy and visual considered in that process.

Working drafts are shown as editorial work, with the campaign visual credited to its source document.
